

SECTION 2

A. SPECIFICATION.

i. Products & Services Management

Record sales and services of the Client using existing module.

i. Accounts Management

Records of all transactions should be traceable to user accounts, third party ledgers and any other defined parameters.

i. Operation Reporting

Automation of financial performance report (Income Statement, Trial Balance, Balance Sheet, Cash Book, General Ledger).

v. Other Facilities

- Inventory records
- Customers' transaction
- Records of payments made and received
- Provide timely status of the affairs of the business

Exhibit A

DESCRIPTION

Passion Accounting Software (**PAS**) is an accounting systems that allows your business to keep track of all records of financial transactions, including purchases (expenses), sales (invoices and income), liabilities (funding, accounts payable), etc. and is capable of generating comprehensive tabular and statistical reports that provide management or interested parties with a clear set of data to aid in the decision-making process.

PAS gathers under the same roof all systems and applications dedicated to managing and processing financial data.

What our accounting software offers:

- i. **Income:** Income represent the totality of cash inflow to the company in exchange for goods or services rendered to another person or company. Revenue from business transactions and other means are recorded and reported for all specified ledgers under Income/Other Revenue classes.
- ii. **Expenses:** The amount of cash that flows out of the company in exchange for goods or services from another person or company are the expenses. PAS has defined categories for expense. PAS allows quick entry, categorisation and automatic balance of expenses.
- iii. **Inventory management:** Inventory management is a specific toolkit developed for stock control, and where you will find all necessary tools to give your business a higher shelf-life product line. This means you will be able to control the availability and movement of your products, and avoid all sorts of delivery issues such as overstocking or understocking. gathers under the same roof all systems and applications dedicated to managing and processing financial data
- iv. **Invoices:** Creating a professional looking invoice is an important part of developing a positive brand image and building confidence with customers. PAS is equipped with instant invoice creation providing ability to customize and automatically keep track of

- v. Funding: All the business liabilities, whether accounts payable, bank loans taken to support the business, or mortgages, etc. PAS keeps track of these liabilities as payable values and automatically updates the balances as soon a payment is made and accounts are settled.
- vi. Reports: All relevant business information has been made available in PAS list below:

Income Statements

Trial Balance Statements

Statement of Financial Position

Cash Flow Statements

General Ledgers

Statements of Accounts Receivables

Historic Transactional Records

Why use PAS?

You've been introduced to **PAS**, but what are its main benefits? It's important that you ask yourself the question of why use **PAS** at all. Well, finance professionals find accounting software to be the companies' most valuable asset that cuts costs and drives productivity. With an appropriate system in hand, companies automate bookkeeping tasks and draft in-time tax-friendly reports, but what is most important, you can forecast expenses and develop a smarter investment strategy with **PAS**.

These are the key benefits of **PAS**:

- i. Simplification: **PAS** put finance control in the hands of a non-accounting audience, as it is designed to give numbers a meaning, and to perform automated calculations. With little to no training at all, you as the business owner can complete all accounting operations and comply with legal standards from your own computer (mobile device), and without paying an external party to keep your budget in the loop.

- ii. Cost savings: **PAS** automate core calculations and administrative procedures, and take control of your revenue framework so that you won't have to outsource finance management to an external expert. In parallel, It also reduce costs related to printing and distributing documentation, and store sensitive data in secure and monitored locations.
- iii. Full financial transparency: From an accountant's or an auditor's point of view, the highlight of good accountancy systems is that they avoid costly and recurring human errors. In the business scenario, calculating inaccurate totals or failing to report data in time can lead to a crisis, and that's where **PAS** is most useful.
- iv. Accurate forecasting: It's one of the main advantages of accounting software. Understanding in detail the patterns and trends of your performance is something that would take ages to complete without a solid system. Accounting software gives numbers a meaning, helping you understand where to cut expenses or where to invest more. With a clear overview of your current financial state, you will find it easier to develop smart strategies and allocate resources the right way.
- v. Productivity: Should you as a business owner have to choose a single suite of digitized services to improve performance, your first option should definitely be accounting software. **PAS** drill deep inside the most cumbersome, day-to-day tasks of your company, collect, organize, and analyze your most sensitive data, and what is most important, helps you make smarter use of your money.
- vi. Improved relationships with customers: One could argue that accounting software has little to do with how customers are served, but that couldn't be any further from the truth. **PAS** work around effective billing and invoicing, and prevent all sorts of delays and miscommunication. **PAS** is also easy to personalize on the business's behalf, and thus, make company performance appear more professional and credible.

- vii. Security: Your financial data is seen as your most valuable information and must be prevented from falling into the wrong hands or getting lost by mistake. That's exactly what **PAS** does for you, prevent accounting from being jeopardized in any way, and keeping an extra copy in case you need to retrieve them. In most cases, you will get to decide your internal security structure, and assign who will have access to sensitive data.

What should you consider when choosing an accounting system?

Of course, the answer to this question depends mostly on the specific needs and priorities of your business, but there are several critical criteria each system has to meet to be worth the money you're investing. Here are few thoughts on what you should be looking for:

- i. An integrated invoicing module. Regardless of the core operations your accounting system should complete (inventory management, for instance), and if possible, you should always acquire a system that offers at least some basic billing and invoicing functionality. This way, you will spare yourself the trouble of purchasing additional software or migrating data to another system.
- ii. Customization. There is no 'one-size-fits-all' accounting system (in fact, this is one of the most diversely targeted software category), and the reason is that each company runs specific finance calculations and adheres to a different set of rules. If you're unable to find a specific system that matches your business model (and that will hardly ever happen), **PAS** is a flexible program that can be adjusted to your operations, and which is able to grow in line with your business.
- iii. Ease of use. There is nothing simple about accounting procedures and calculations, so the least your new accounting system should do is to give you an intuitive environment to work in. This means information should be arranged neatly and functions should be

Eplus .: Projectz (RC 3081512)

available on a single dashboard, and you should complete operations within minutes following a navigation pattern you already know.

- iv. **Security.** As already pointed out, **PAS** play around the business's most sensitive data, namely the numbers it depends on. In order to ensure that making calculations and sharing data within the system is bulletproof, **PAS** is embedded with several tested security mechanisms.
- v. **Connectivity.** At the point where you're paying for an accounting solution, you will already have an array of software pieces to put up with it. In order to avoid changing your entire software infrastructure for the needs of a single program, do things the other way around – **PAS** integrates with the tools you have, or, in the best scenario, **PAS** is compactible with major common and updated web browser platforms.
- vi. **Pricing.** The software logic applies again: The more a system can do, the more it will cost, however, our pricing policy are business friendly!
- vii. **Reliable support.** Most accounting software vendors pride themselves with knowledgeable and fast-to-respond teams, but truth is you won't know how efficient they are before you've actually had an issue to submit. To prevent some bitter disappointment for the money you've invested, **PAS** help line is testable in advance to inform your inquiries and attend yours complains.

How much does PAS cost?

Accounting is not exactly the cheapest and small-biz friendliest software arena you will come across. Much of its premium functionality and instant technical support is still reserved for enterprises, but that doesn't mean a quality system cannot be found below that line.

PAS comes with flexible annual usage cost, while some of our designs are available for specified period of free-trial.

Annual usage/sustenance fee of **#184,000** per units applies to all current services.
